Re: Onion Set Supply

With regard to the supply of onion sets, I can confirm that these are sourced in Holland, Belgium and France and produced in accordance with the NAKT (formally NAKG) Quality Assurance Scheme.

All onion sets sourced from Holland, Belgium and France are from conventional breeding programmes, we do not supply any genetically modified onion varieties and there are currently no genetically modified onion varieties produced in Europe.

Sets are fungicide drenched and dried back immediately before despatch. Current approval for use in Holland is Rudis (Prothioconazole) principally for fusarium and white rot.

Please do not hesitate to contact us if you require any further information.

Yours sincerely
